

Tobacco-style Aromas for Electronic Cigarettes & E-Liquids

Ecig Flavour.com has proven expertise in the creation of a sophisticated range of tobacco-style aromas.

We can offer a comprehensive range of standard products (listed below) available in quantities from 1KG. We also offer a bespoke technical development consultancy for exclusive 'signature' tobacco-style products.

We supply sophisticated premium products to the boutique artisanal e-liquid manufacturer, as well as bulk IBC's of more simple products to the high volume manufacturer. We also supply very concentrated liquid 'hearts' for economic shipment to manufacturing locations around the world.

Questions often arise regarding recognisable brands of cigarettes as smoked, whether Benson & Hedges, Lambert & Butler, Marlboro or Shanghai Chunghwa. We have analysed many flavoured e-liquids originating outside Europe, that mistakenly use these brand names.

Our conclusions are-

- We will not market flavourings under tobacco brand names
- We have evaluated many examples claiming to taste of a single recognisable brand, which all taste completely unlike
- We believe that the name of a flavoured e-liquid says nothing about the taste - each Tobacco-type flavourings needs to be tried and evaluated on its' own merits to the consumer

Therefore we offer the professional Flavourists' tasting notes below (although, like fine wine, there is never a 'right answer' and its' all down to your preference).

Our customers decide which of our products meets their preference and established taste; and it is the customer who must decide what to call their flavoured e-liquid for marketing purposes.

Our products formulated for e-liquids are made from food-grade pure substances and European

Pharmacopeia grade solvents. Some tobacco-style items incorporate small quantities of real tobacco extracts (trace nicotine). Our extracts are natural and processed under food-grade principles and controls, including HACCP.

We are pleased to support our customers' notification and compliance activity under Article 20 of the Tobacco Products Directive. Full formulation details and a hazard assessment on every one of our raw materials are available, subject to agreement.

Our Tobacco-type products are free from acetoin, diacetyl, 2,3 hexanedione, 2,3 heptanedione, 2,3 pentanedione (Acetyl Propionyl), terpenes, oils & lipids, essential oils. Please refer to our Raw Material, Quality & Safety Policy for details (downloadable from our web-site)

Our products are pure aromas, free from added colour. We have removed raw material substances that have been demonstrated to elute with nicotine in GCMS analysis.

Product description	Code	Tasting Notes	Containing Tobacco Extract
Menthol Tobacco	14567	Rich tobacco, creamy, dried fruit, mint	■
Tobacco	14579	Vanilla, caramel, fruit & nut, hint of anise
